BENVENUTI NEL TEAM CANNONDALE.

> Siamo un gruppo di ciclisti, atleti, ingegneri, innovatori che passano le loro giornate concentrati su un solo obiettivo – creare la bici perfetta...per te.

Per ottenere questo risultato pedaliamo le nostre bici ogni giorno. Gareggiamo. Discutiamo con i nostri compagni di uscita, da quelli della sgambata del mercoledì sera a quelli che gareggiano al Tour o alla Megavalanche, fino a quelli fermi al semaforo durante gli spostamenti mattutini. Ascoltiamo, modifichiamo, proviamo e pedaliamo di nuovo.

Questo processo, questa passione per il ciclismo che è il cuore della cultura Cannondale, è il motore che ci spinge. È la fonte di ispirazione per incredibili nuove bici come la SuperSix EVO Nano – il telaio da corsa più avanzato mai prodotto, la Trigger – il nuovissimo membro della famiglia OverMountain, la lama affilata Slice RS da crono, le Quick Speed e Quick CX perfette machine per stare in forma e muoversi velocemente.

Quindi, sia che tu sia un garista di alto livello, un duro e appassionato mountain biker, un pendolare o un cacciatore di sentieri nel weekend, noi abbiamo la bici disegnata apposta per te – your perfect ride.

Benvenuto nel Team.

MOUNTAIN

CANNONDALE MOUNTAIN —

Nel difficile caos dello European Enduro Series, nella competizione a tutto gas del World Cup XC oppure sul veloce singletrack tecnico proprio dietro la nostra sede centrale nel Connecticut, la passione per i percorsi nodosi e fangosi ci spinge a creare mountain bike perfette per i tuoi percorsi e per la tua anima.

OVERMOUNTAIN

RIDEFINISCE IL CONCETTO DI "ALL" NELLA PRATICA DELL'ALL-MOUNTAIN

Che scegliate la Big-Mountain Claymore, le All-Mountain Jekyll e Scarlet, o le Cross-Mountain Trigger e Trigger 29'er, i leggeri telai OverMountain, robusti e ultra-reattivi con la possibilità di cambiare in corsa l'escursione, la risposta degli ammortizzatori e la geometria vi consentono di conquistare la montagna in ogni suo aspetto, meglio che mai.

> DOPPIO AMMORTIZZATORE FOX DYAD RT2

L'unico vero ammortizzatore 2-in-1 al mondo. Nascosti all'interno del DYAD ci sono due diversi ammortizzatori: uno ad escursione corta (Elevate) e uno ad escursione lunga (Flow), che consentono di cambiare al volo l'escursione, la curva di compressione e la geometria per le migliori prestazioni possibili attraverso il più ampio spettro di terreni.

ELEVATE: Come montare un ammortizzatore ad corta escursione sulla vostra bike. Escursione più corta fortemente progressiva che fornisce una grande trazione e la massima efficienza di pedalata. Idraulica dedicata, ottimizzata per la salita e per pedalare veloce.

FLOW: Come passare ad un ammortizzatore a molla a lunga escursione. Escursione più lunga, con progressione lineare che offre una sospensione morbida prevedibile per discese ad alta velocità. Idraulica dedicata, ottimizzata per il massimo della morbidezza e del controllo.

> GEOMETRIA A DOPPIA PERSONALITÀ

Le diverse parti di un percorso richiedono geometrie differenti. Le arrampicate e i terreni tecnicamente impegnativi richiedono una manovrabilità più agile e una posizione efficiente in sella, mentre le discese a tutta richiedono un baricentro più basso e una guida più stabile. Passando tra le due modalità di escursione dell'ammortizzatore DYAD la geometria della bicicletta cambia di conseguenza grazie a un diverso valore di sag.

ELEVATE: Nell'impostazione ad escursione più corta, il sag è inferiore, quindi il movimento centrale è più alto e gli angoli di sterzo e piantone sono più verticali, per una maggiore maneggevolezza e un'arrampicata più potente.

FLOW: Nell'impostazione ad escursione più lunga, l'ammortizzatore aumenta il sag e il movimento centrale ribassato e gli angoli più morbidi donano una grande stabilità alle alte velocità e in curva.

> ECS-TC

Enhanced Center-Stiffness, Torsion Control – L'ECS-TC è la chiave della guida incredibilmente reattiva dell'OverMountain. Una bicicletta è rigida solo quanto lo sono le sue parti più deboli, quindi abbiamo creato il sistema ECS-TC per rimuovere la flessione e il gioco dai link e dai perni che collegano il triangolo anteriore e lo snodo principale. Eliminando le flessioni indesiderate ne risulta una bici che risponde istantaneamente agli input da parte del rider per il massimo delle prestazioni e del controllo.

ASSI PASSANTI DA 15MM: Avendo il link dell'ammortizzatore e lo snodo principale bloccati direttamente su assi passanti oversize, l'asse stesso diventa un elemento strutturale per la prevenzione di una flessione torcente.

CUSCINETTI POSIZIONATI A DISTANZA: Tutti i link presentano i cuscinetti posizionati il più distanti possibile, per massimizzare la rigidità.

DOPPI CUSCINETTI SUGLI SNODI DEL CARRO: Collocando due cuscinetti fianco a fianco nei perni posteriori si elimina il gioco torcente nella sede dei cuscinetti per una reattività immediata.

BIG-MOUNTAIN > CLAYMORE

Rider amano i colpi forti e i grossi salti ma che desiderano andare oltre i semplici bike park e risalite furgonate.

TRAVEL: 180 / 110mm [R], 180mm [F]

ENDURO > JEKYLL MX

Racer Enduro/SuperD e duri rider all-mountain che hanno bisogno di avanzate possibilità discesistiche bilanciate con la capacità di salire fino in cima.

TRAVEL: 150 / 90mm [R], 160mm [F]

ALL-MOUNTAIN > JEKYLL

Per rider tecnicamente aggressivi che amano le arrampicate rapide e le discese ancora più veloci su una vasta gamma di tipologie di terreno.

CLAYMORE

> SIATE LA VOSTRA SEGGIOVIA.

La Big-Mountain Claymore porta una versatilità e una guidabilità senza precedenti nella categoria long-travel. Azionando una levetta si trasforma da un cavallo da battaglia con corsa da 180 mm in un'efficiente trail bike per climbing con corsa di 110 mm. La scelta perfetta per i bike park, le risalite furgonate e per sentieri di esplorazione che nessuna seggiovia servirà mai.

> REGOLABILITÀ SUPREMA

L'attacco dell'ammortizzatore a 2 posizioni vi consente di scegliere l'altezza iniziale del movimento centrale e gli angoli per adattarsi al vostro stile di guida e al terreno, in più la doppia modalità del DYAD, Elevate (110mm) e Flow (180mm), regola ulteriormente la geometria, l'escursione e la risposta degli ammortizzatori in corsa. È come avere due bike completamente differenti in una.

> ASSI PASSANTI ECS-TC

Una delle motivazioni chiave per l'incredibile reattività della Claymore è il sistema ad asse passante ECS-TC (Enhanced Center-Stiffness – Torsion Control). Il link dell'ammortizzatore e il forcellone sono connessi direttamente a massicci assi passanti da 15mm, eliminando così le flessioni e permettendo alla bici di rispondere istantaneamente ai comandi.

> DOPPI CUSCINETTI

Per incrementare ulteriormente la rigidità e la risposta, Claymore viene dotata di cuscinetti double-stacked sui perni posteriori. Collocando due cuscinetti fianco a fianco eliminiamo il gioco torsionale nei cuscinetti, irrigidendo il braccio oscillante e migliorando la sensibilità e il controllo.

JEKYLL MX

> L'ARMA PER LA COMPETIZIONE ENDURO.

Se il vostro stile di guida e di gara mescola climbing e pedalata con tonnellate di discese a tutta birra, la Jekyll MX è la bici che fa per voi. Ispirata dalle configurazioni con cui corre il team OverMountain, la MX prende la reattività istantanea e la versatilità dalla doppia natura della Jekyll e la rende ancora più abile in DH con una specifica completa pronta per l'Enduro.

> DYAD RT2

I rider OverMountain utilizzano la modalità Elevate del DYAD per più che il semplice climbing. Passano a lei per efficienti partenze veloci, per andare a tavoletta abbassandosi e guadagnare tempo sulle sezioni di pedalata. Poi torna al FLOW per una discesa fluida a tutta birra.

> SPECIFICA ROBUSTA DA ENDURO

La specifica parti ispirata al team OverMountain include una robusta forcella FOX 36 con asse passante da 20mm, ruote resistenti WTB Stryker, guidacatena MRP e reggisella dropper RockShox così la MX è pronta a tutto.

> TELAIO IN LEGA SMARTFORMED

SmartForming è un mix sofisticato di idroformatura, sagomatura meccanica, stratificazione progressiva, saldatura liscia a doppio passaggio, forgiatura 3D e trattamento termico in piccoli lotti (un modo complicato di dire che è la struttura in alluminio più aggressiva del pianeta).

› BEN CRUZ.

“È veramente rigida. È precisa e controllabile, anche sui terreni più brutali.”

JEKYLL

> PEDALA OVUNQUE. CAVALCA QUALSIASI OSTACOLO.

La Jekyll è la All-Mountain più versatile in circolazione. Con la sua escursione regolabile in corsa da 90 mm a 150 mm e la geometria che cambia trasformandosi da agile trail-bike a stabile discesista muovendo una levetta, è la macchina perfetta per rider all-mountain tecnicamente aggressivi che scalano in fretta, ma che desiderano scendere persino più velocemente lungo tutti i terreni montani.

> DYAD RT2

La stessa tecnologia DYAD di due ammortizzatori in uno che troviamo nelle altre bici OverMountain, ma con corsa dell'ammortizzatore, volume delle camere e circuiti di smorzamento ottimizzati per la modalità Elevated 90 mm e Flow 150 mm della Jekyll.

> SISTEMA ECS-TC

Gli assi passanti da 15 mm in corrispondenza del link ammortizzatore e dello snodo principale, insieme ai doppi cuscinetti nei perni dei forcelini posteriori eliminano la flessione e garantiscono una robustezza centrale senza eguali, per un controllo e una reattività totali.

> TELAI ROBUSTI E LEGGERI

Che sia il leggero e incredibilmente resistente carbonio BallisTec o l'insuperabile tecnologia in alluminio della nostra lega SmartFormed, i telai Jekyll offrono una combinazione di peso leggero, durabilità e rigidità che vi consentono di galleggiare sulle salite e bruciare le discese.

> MARK WEIR.

“Sono più veloce ovunque sulla mia Jekyll, sia in salita che in discesa. È incredibile. È decisamente la bici costruita per il tipo di percorsi gi oggi.”

TRIGGER 29ER

> OVERMOUNTAIN. OVER ANYTHING.

Salire con una agile race-bike ultra-efficiente con escursione di 80 mm, scendere con una inarrestabile e precisa macchina da trail con ruote grosse e escursione di 130 mm. La Trigger 29'er combina le personalità doppia escursione/doppia personalità della OverMountain con la trascinante inerzia delle "big wheel" che travolge qualsiasi cosa. È un match perfetto.

> DYAD RT2

Mentre altre 29'er a escursione lunga sono forzate ad accettare un compromesso tra le necessità di salire e di scendere, l'ammortizzatore DYAD della Trigger 29'er le consente di modificare l'escursione, lo smorzamento e la geometria per adattarsi al terreno, in modo da risultare nettamente vincente sia nel climbing che nelle discese.

> SISTEMA ECS-TC

La rigidità è persino più importante sulle 29'er. La Trigger 29'er ha gli assi passanti ECS-TC oversize, bloccati sullo snodo principale e i pivot del ammortizzatore, e doppi cuscinetti in corrispondenza di ciascuna estremità dei foderi bassi per ridurre radicalmente la flessione e il gioco per il massimo in materia di reattività e controllo.

> GEOMETRIA IDEALE 29'ER

Il tubo reggisella curvato consente alla Trigger 29'er di presentare foderi alti incredibilmente corti per una manovrabilità e un'agilità fulminea, pur continuando ad ottenere un'escursione piena di 130 mm in modalità Flow.

TRIGGER

> LA VELOCITÀ DEL CROSS-COUNTRY INCONTRA LA CAPACITÀ DELL'ALL-MOUNTAIN: PREMI IL GRILLETTO.

La Cross-Mountain TRIGGER spazza via il confine tra cross-country e all-mountain. Corsa più breve con una geometria più orientata al fast-trail, Trigger porta la migliore tecnologia OverMountain a rider fluidi e rapidi il cui stile e terreno richiede meno corsa e aggressività della Jekyll.

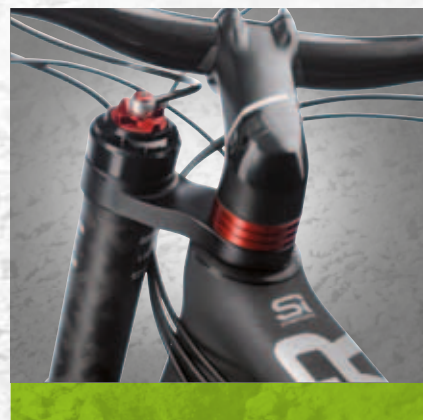

> DYAD RT2

Un ammortizzatore DYAD più piccolo offre gli stessi benefici "due in uno" e prestazioni della Claymore e Jekyll, ma a misura della Trigger. Elevate (70 mm) offre un'efficienza di bike da gara, mentre Flow (120 mm) offre una sensazione all-mountain più morbida.

> SISTEMA ECS-TC

Gli assi passanti da 15 mm, bloccati, in corrispondenza del link ammortizzatore e dello snodo principale eliminano la flessione e garantiscono una robustezza centrale senza eguali, per un controllo totale.

> SYSTEM INTEGRATION

Riusciamo ad ottenere incredibili risparmi di peso e la massima efficienza progettando componenti e telai che collaborano tra loro. La nostra forcella Lefty e lo stelo Si OPI offrono una rigidità insuperata e peso leggero per una bike con escursione lunga.

> JEROME CLEMENTZ.

“3 parole per descrivere la Cannondale
Trigger: Efficiente, Regolabile e Divertente”

LEFTY

> PRESTAZIONI SUPERIORI GRAZIE AL DESIGN NON CONVENZIONALE.

La sospensione anteriore PIÙ LEGGERA/RIGIDA/ROBUSTA/MORBIDA —
Ora con TECNOLOGIA A CUSCINETTI AD AGHI IBRIDI SIGILLATI

> LA LEFTY È PIÙ LEGGERA

Il design minimalista a stelo singolo di Lefty le consente di essere più leggera rispetto alla maggior parte delle forcelle da gara XC più leggere della concorrenza.

> LA LEFTY È PIÙ RESISTENTE

Le doppie corone e la struttura oversize invertita di Lefty le danno una tale resistenza che persino la Lefty più leggera può presentare prestazioni superiori alle robuste forcelle all-mountain nei test distruttivi.

> LA LEFTY È PIÙ RIGIDA

La robusta struttura della Lefty, combinata al design “scatolare” dell’ammortizzatore e il cuscinetto di scorrimento inferiore la rendono più rigida a livello torsionale rispetto a qualsiasi forcella al mondo per un’estrema precisione dello sterzo.

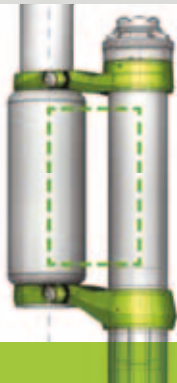

> LA LEFTY È PIÙ LINEARE

Il fulcro della Lefty, ovvero la tecnologia con cuscinetti ad aghi ibridi brevettata di Cannondale, garantisce il libero movimento delle sospensioni, indipendentemente dal carico. Anche quando sottoposta alle forze di frenata, impatto e sterzata più intense, la ruota riesce a seguire il terreno in maniera fluida per il massimo controllo.

> LEFTY È SENZA PROBLEMI

Il nuovo design ibrido consente all’intera struttura della forcella di essere completamente sigillata contro gli elementi per una vita di servizio lunga ed è dotata di cuscinetti ad aghi auto-resettanti per eliminare la necessità di ricorrenti reset manuali.

> DDESIGN INVERTITO A DOPPIA CORONA

Con il tubo della forcella più rigido e più grande sulla sommità dove può combattere con maggiore efficacia la flessione e aggiungere resistenza, e doppie corone che lo collegano saldamente al tubo sterzo, il design non convenzionale della Lefty è semplicemente il modo più leggero, rigido e resistente di realizzare una forcella.

> DESIGN "SQUARE IN SQUARE"

Le piste dei cuscinetti ad aghi creano un'interfaccia di tipo "a doppio quadrato concentrico" tra il fodero e lo stelo della forcella, impedendo ai due tubi di ruotare l'uno rispetto all'altro come invece succede con il design delle forcelle tradizionali. E' il motivo per cui Lefty e' cosi' incredibilmente rigida e precisa."

> SISTEMA CON CUSCINETTI AD AGHI IBRIDI

Cuscinetti ad aghi senza frizione offrono una sospensione di una morbidezza impareggiabile in tutte le condizioni di carico, mentre il cuscinetto di scorrimento inferiore fornisce un ulteriore supporto per una maggiore rigidità e precisione di sterzo mano a mano che la forcella avanza nell'escursione.

> SISTEMA DI SIGILLATURA DURATHON

Un vasto sistema di sigillatura interno ed esterno mantiene la roba buona all'interno e la schifezza fuori, consentendo di più che raddoppiare i tempi tra i servizi raccomandati rispetto alla nostra concorrenza.

SUPERMAX 29'ER

> LEFTY DIVENTA GRANDE.

La SuperMax tutta nuova prende tutto ciò che rende grande la Lefty e lo rende ancora più grande. Il risultato: una forcella rigida e forte come la maggior parte delle forcelle DH a doppia piastra, tuttavia più leggera della maggior parte delle forcelle all-mountain. Proprio quel che serve per 29' a escursione più lunga.

> MASSICCIAMENTE OVERSIZE

Lo stelo inferiore della SuperMax misura 36 mm di diametro, mentre l'enorme stelo superiore raggiunge i 46mm per la massima rigidità e precisione di sterzo.

> COMPATIBILE CON ATTACCHI MANUBRIO CORTI

Per accomodare le attuali impostazioni per il riding su trail, l'asse decentrato consente allo stelo della forcella di arretrare ulteriormente, creando uno spazio sufficiente per montare attacchi manubrio corti, anche da 50 mm.

> TAGLIE MULTIPLE

Per garantire che i rider riescano a ottenere la migliore calzata sulle 29'er a escursione lunga, la SuperMax viene proposta con diverse spaziatore tra le piastre per adattarsi a differenti lunghezze del tubo sterzo.

> MOZZO PIÙ LARGO

Il nuovo mozzo SuperMax Lefty è dotato di una maggiore distanza tra le flange che consente una migliore angolazione dei raggi per ruote più robuste e più rigide.

> LEFTY OPZIONI.

SCALPEL 29ER

> DISTINGUITI.

Questa 29'er a doppia sospensione, ultraleggera e super maneggevole attacca senza il minimo sforzo serpentine, sentieri tortuosi e sfreccia sui rettilinei. Con la sua forcella Lefty ultra precisa e una geometria da 29'er corsaiola e reattiva, la Scalpel 29'er fonde l'inarrestabile inerzia delle 29'er con la velocità e l'agilità di una 26'er - esattamente quello che cercano i rider estremi su trail veloci, gli atleti marathon e i racer XC.

> STRUTTURA SUPERLEGGERA

I telai ultra-leggeri sono disponibili in versione in carbonio BallisTec oppure in lega SmartFormed. Aggiungi System Integration della forcella Lefty, attacco manubrio/canotto sterzo OPI e otterrai un peso complessivo che i nostri concorrenti possono solo sognarsi.

> CARATTERISTICHE DI POTENZIAMENTO DELLA RIGIDITÀ

Una coppia di link ammortizzatore robusti, in alluminio lavorato a macchina con assi passanti ECS-TC da 15 mm bloccati nel link dell'ammortizzatore e nello snodo principale per eliminare flessione e gioco, fornendo un'accelerazione scattante e un controllo preciso.

> FODERI ALTI ZERO-PIVOT

Mediante una stratificazione precisa del carbonio, i foderi bassi sono studiati per flettersi verticalmente pur rimanendo estremamente rigidi lateralmente e a livello torsionale per la migliore miscela di leggerezza e rigidità reattiva. Le Scalpel in lega vengono dotate di doppi cuscinetti ECS-TC, come la Jekyll, nei perni dei forcellini al posto dei foderi di Zero Pivot, per la massima rigidità.

RZ ONE TWENTY

➤ A PROVA DI QUALSIASI PERCORSO, PRONTA ALLA GARA.

Questo raffinato design single-pivot è il culmine di anni di esperienza nella doppia sospensione. Il telaio leggero e rigido e la sospensione morbida offrono una qualità di guida bilanciata, efficiente e divertente, rendendo la RZ la scelta perfetta per i racer del fine settimana e per rider su trail "all day". I modelli pronti per la competizione RZ One Twenty XLR sono dotati di specifica componentistica migliorata e una forcella Lefty con escursione di 120 mm.

Un ammortizzatore regolato in modo personalizzato, abbinato a uno swing link di precisione, fornisce 120 mm di corsa perfetta a più stadi, morbida all'inizio, lineare nella fase centrale per una pedalata efficiente e più stabile alla fine per evitare i finecorsa.

➤ MANOVRABILITÀ ECCELLENTE

Miscela perfetta di stabilità e agonismo, la geometria della RZ ti consente di sentirti perfettamente a tuo agio e mantenere il controllo indipendentemente da cosa tiene in serbo per te la montagna, rendendo questa bike da trail una perfetta macchina a tutto tondo.

➤ ALLUMINIO SMARTFORMED

Un complesso mix di idroformatura, sagomatura meccanica, spessore variabile, saldatura liscia a doppio passaggio e il tubo reggisella Backbone 3D OPI (One Piece Integration) forgiato, scatola del movimento centrale e link ammortizzatore offrono il massimo della resistenza e il minimo del peso.

SCALPEL RACE

> LA PIÙ POTENTE ARMA DA COMPETIZIONE CROSS-COUNTRY.

Concepita per i rider XC hardcore che vogliono una performance da doppia sospensione a un peso inferiore di quello della maggior parte delle hardtail. La combinazione di struttura in carbonio BallisTec, foderi Zero Pivot e componenti System Integration come la forcella Lefty e l'attacco/tubo sterzo OPI rendono la Scalpel la bici da gara a doppia sospensione più leggera, rigida e reattiva mai creata.

> CARBONIO BALLISTEC

Grazie all'uso di fibre sviluppate nel settore militare per le armi balistiche, questa struttura in carbonio estremamente resistente consente di realizzare un telaio ultraleggero ma, in proporzione, più forte dell'acciaio.

> SISTEMA FODERI POSTERIORI ZERO PIVOT

Grazie alla sofisticata stratificazione del carbonio, i foderi bassi e quelli alti sono progettati per flettersi verticalmente, rimanendo invece molto rigidi lateralmente, per fornire 80 mm di corsa effettiva della ruota posteriore, eliminando al contempo il peso dei perni dei cuscinetti.

> SYSTEM INTEGRATION

Progettare la Scalpel Race attorno a componenti System Integration come le nostre forcelle Lefty e gli attacchi/tubi sterzo Si OPI consente ai nostri telai, già i più leggeri della categoria, a diventare bici complete incomparabilmente leggere.

F29

> LA 29'ER PIÙ RAFFINATA.

Racer e puristi della hardtail ovunque hanno scoperto che la Cannondale F29s offre il massimo delle prestazioni 29'er. Con i loro telai ultraleggeri, ultra-rigidi, la tecnologia a micro-sospensione SPEED SAVE e la geometria da gara 29'er, le F29 combinano il peso leggero e l'agilità di bike con ruote 26" alla inarrestabile inerzia delle "big wheel".

DISPONIBILE IN 3 OPZIONI TELAIO:

Estremamente leggera Hi-MOD BallisTec Carbon, ultra-leggera BallisTec Carbon, o super-leggera SmartFormed Alloy

> REGGISELLA SAVE

Mediante l'uso di stratificazioni sofisticate del carbonio il nostro reggisella SAVE aggiunge al telaio oltre 20 mm di potenziamento del comfort, assorbimento e smorzamento degli urti. Questo si traduce in una minore fatica e un maggiore comfort, permettendoti di rimanere in sella più a lungo e di andare più veloce.

> LEFTY SYSTEM INTEGRATION

L'estrema leggerezza e precisione delle nostre forcelle Lefty è un vantaggio ancora maggiore sulle 29'er. La sua eccellente rigidità e la sua leggerezza fanno una differenza ancora maggiore sulle bici con le ruote più grandi. Se combinata con il superleggero attacco manubrio/canotto sterzo OPI e l'Hollowgram SL BB30, la System Integration di Cannondale consente di risparmiare centinaia di grammi.

> TECNOLOGIA DI ELIMINAZIONE DELLE VIBRAZIONI SPEED SAVE

I foderi posteriori SPEED SAVE creano un micro sistema di sospensione messo a punto per il riding consentendo alla ruota posteriore di seguire il terreno, migliorando il controllo, la trazione e la manovrabilità. Questo consente alla bici di correre più veloce, accelerare meglio e curvare più intensamente.

> TELAIO NUOVISSIMO

Modellata sulle nostre bike della serie F di alta gamma, i telai Trail SL sono stati completamente ridisegnati per il 2013 con tubazioni nuove più leggere, forcellini più leggeri e caratteristiche SAVE più esagerate. Più leggera, più rigida, più morbida ... migliore.

> MAESTRIA CANNONDALE CON L'ALLUMINIO

Forme delle tubazioni complesse, inspessimento interno morbido e le nostre caratteristiche saldature lisce a doppio passaggio illustrano la maestria nei telai in alluminio Cannondale. Il nostro meticoloso processo elimina molti elementi di stress e punti deboli tradizionalmente tipici dei telai saldati, consentendoci di costruire telai più leggeri e più resistenti.

> GEOMETRIA RACE 29'ER

Nuova per il 2013, la Trail SL 29'er ottiene la nostra geometria da gara 29'er dalla manovrabilità agile. Il passo più breve e l'angolo di testa più stretto le conferiscono una sensazione incredibilmente rapida, agile e precisa.

BICICLETTE DA STRADA CANNONDALE: PERFORMANCE ALLO STATO PURO.

Dai record delle SuperSix EVO e CAAD10 al comfort dell'uso quotidiano della Synapse, le bici da strada Cannondale sono concepite per fornire performance allo stato puro. Le più leggere nella loro categoria, l'equilibrio perfetto tra rigidità e vivace comportamento di guida in puro stile Cannondale.

SUPERSIX EVO

> “LA BICI MIGLIORE AL MONDO”

La SuperSix EVO è il massimo che si possa desiderare da una bici da corsa su strada. Progettata per essere la miscela perfetta di tutti i fattori chiave della performance – peso, rigidità, resistenza, assorbimento degli urti, manovrabilità e aerodinamica – la EVO è talmente evoluta da aver ricevuto dal Tour magazine in Germania il riconoscimento di “Migliore bicicletta al mondo” (marzo 2012).

OPZIONI TELAIO EVO

- > EVO NANO: Il telaio più leggero prodotto sul pianeta utilizza una struttura avanzata in carbonio BallisTec ad alto modulo e resine da nanotecnologia per un massimo risparmio in termini di peso.
- > EVO HI-MOD: L'EVO originale. La struttura in carbonio BallisTec ad alto modulo garantisce leggerezza e rigidità estreme.
- > EVO CARBON: EVO Carbon: Una struttura con una percentuale superiore di fibra a modulo intermedio BallisTec espande la linea EVO con un telaio dalla performance super elevata inferiore a 950 grammi.

> BALLISTEC CARBON

La tecnica costruttiva in carbonio High Strength di Cannondale consente di realizzare prodotti estremamente leggeri con una rigidità e una resistenza eccezionali.

> SISTEMA DI MICRO-SOSPENSIONE SPEED SAVE

Sottili zone flettenti integrate nei foderi bassi e alti consentono alla ruota di seguire il tracciato del terreno, migliorando la velocità, la manovrabilità e il comfort. Messa a punto per l'uso con la forcella con forcellini offset SPEED SAVE.

> AREA FRONTALE RIDOTTA

Rispetto alle oversize della concorrenza la EVO presenta il tubo obliquo più piccolo del 20% circa, il tubo dello sterzo più piccolo dell'11%, e i foderi della forcella più sottili del 15%. Questo significa area frontale ridotta e meno resistenza aerodinamica. Infatti, i test dimostrano che la EVO ha pochissima resistenza aerodinamica in più rispetto ai migliori telai “aero”, senza il loro peso aggiunto e la loro guida ruvida.

SUPERSIX

> VINCITRICE PER RAZZA.

Leggera e rigida, con una sensazione incredibilmente vivace e comunicativa in sella, la SuperSix è la discendente diretta del telaio che ha portato il team Liquigas-Cannondale alla vittoria nel Giro d'Italia e nella Vuelta a España. Pronta per la competizione.

> TELAIO LEGGERO

La SuperSix pesa solo 1050 grammi e offre la guida brillante e l'accelerazione esplosiva che distingue le bici Cannondale.

> FODERI ALTI "A CLESSIDRA"

Una sottile curvatura a forma di clessidra e una raffinata stratificazione in carbonio, specifica per il carico, danno ai foderi alti della SuperSix la capacità di assorbire gli urti verticali e le vibrazioni dei fondi accidentati, migliorando sia il comfort che il controllo.

> MOVIMENTO CENTRALE BEATBOX BB / BB30

13 anni fa Cannondale ha rivoluzionato l'interfaccia pedivella/movimento centrale inventando il BB30. Qui, questo meccanismo è posizionato nella scatola movimento centrale BeatBox massicciamente sovradimensionata, per ottenere il massimo del trasferimento di potenza.

CAAD10

➤ LA MACCHINA DA GARA SU STRADA IN ALLUMINIO PIÙ RAFFINATA AL MONDO.

Con un telaio che pesa solo 1.150 grammi, la CAAD10 non solo è più leggera di molti dei prestigiosi telai in carbonio della concorrenza, ma è anche più rigida e più morbida, il che la rende la scelta perfetta per aspiranti racer o per chiunque cerchi un'alternativa ad alte prestazioni al carbonio.

➤ COSTRUZIONE IN LEGA SMARTFORMED 6069

Un insieme di idroformatura, formatura meccanica, ispessimento variabile, saldature lisce a doppio passaggio e trattamento termico: SmartForming è la struttura in alluminio più avanzata al mondo, per telai più leggeri e più forti.

➤ FODERI SPEED SAVE

La forma appiattita e l'ispessimento interno dei foderi bassi e alti della CAAD10 consentono la flessione verticale, mantenendo la rigidità laterale e torsionale. Questo permette alla ruota posteriore di seguire il tracciato del terreno, migliorando la velocità, il controllo in curva, la tenuta di strada e il comfort.

➤ FORCELLA SPEED SAVE

La forcella da 390 grammi presenta un canotto sterzo conico da 1-1/8" a 1-1/4" per il bilanciamento ottimale di peso e rigidità, e forcellini in offset, che consentono un angolo più aperto della forcella e l'assorbimento degli urti senza compromettere la maneggevolezza. La forcella SPEED SAVE è adattata ottimamente ai foderi SPEED SAVE come sistema di micro sospensione.

SYNAPSE CARBON

> LE PRESTAZIONI DA GARA ÉLITE INCONTRANO IL COMFORT DELL'USO QUOTIDIANO.

Come le migliori automobili da grand touring, la nostra linea Synapse di bici da strada unisce una performance aggressiva a un lusso raffinato. Una rigidità di livello professionale e la leggerezza del peso incontrano una morbidezza che assorbe gli urti e una posizione di guida che invita a passare intere giornate in sella. Che scegliate la Synapse Hi-MOD ultra-leggera, la Synapse Carbon dalla guida morbida o la versatile Synapse Alloy, scoprirete che andar VELOCE non ha mai dato vibrazioni tanto positive.

> SAVE PLUS SISTEMA DI MICRO-SOSPENSIONE POSTERIORI

La stratificazione direzionale del carbonio e tubi sagomati per un assorbimento eccezionale delle vibrazioni conferiscono al sistema foderi basso/foderi alto SAVE PLUS un comfort incredibile, migliorando effettivamente la rigidità laterale e torsionale del telaio.

> FORCELLA IN CARBONIO INTEGRALE SAVE PLUS

I forcellini offset consentono ai foderi della forcella di presentare l'assorbimento verticale degli urti di una forcella con rake minimale, mantenendo la guida agile e precisa della Synapse. La raffinata stratificazione del carbonio e la foggatura SAVE potenziano ulteriormente l'assorbimento verticale degli urti della forcella. Messa a punto per lavorare con il triangolo posteriore SAVE PLUS.

> GEOMETRIA PERFORMANTE

Rispetto alla nostra geometria racing di categoria Elite, la Synapse presenta un tubo sterzo di 2-2,5 cm più alto, un angolo di sterzata leggermente più aperto e un interasse più lungo, per una posizione di guida più rialzata e una sensazione stabile, ma sempre vivace. Ispira fiducia, ma anche relax, senza quella sensazione di scivolamento e la manovrabilità terribile di molte bici da strada "comfort".

SLICE RS

> STRETTO È AERO – NARROW IS AERO™

La Slice RS è l'arma definitiva nella gara contro il tempo. Ogni dettaglio della bicicletta, dalla forcella radicale senza tubo di sterzo ai freni aereodinamici fino al tubo reggisella ultra minimalista, è studiato per essere il più sottile possibile, riducendo la resistenza e consentendo a bicicletta e rider di fendere morbidamente l'aria. Aggiungete caratteristiche come il nostro sistema anti vibrazioni AERO SAVE, il nostro sistema di adattamento modulare CFit e avrete una macchina che taglia il tempo, confortevole come è la aero.

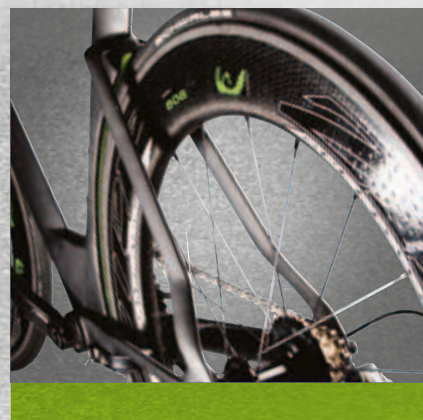

> STRETTO È AERO – NARROW IS AERO™

La forcella del tubo di sterzo esterno e il tubo reggisella Naero-Tec aiutano la Slice RS a opporre al vento un'area frontale di dimensione assolutamente minima. La struttura è anche estremamente rigida, per una precisione di manovrabilità senza eguali.

> FRENI A CONO DI SVENTAMENTO

I freni integrati sono nascosti nel cono di sventamento della forcella e del movimento centrale. La struttura modificata dei freni a V è semplice da regolare e offre tonnellate di potenza frenante.

> SISTEMA ANTI VIBRAZIONE AERO SAVE / WINDTUNNEL

La stratificazione del carbonio e le forme angolate dei foderi alti AERO SAVE interagiscono con i foderi bassi Naero Plane per assorbire gli urti, riducendo l'affaticamento e ottimizzando il controllo. Il canale WindTunnel dietro al tubo verticale riduce la resistenza aerodinamica da pressione causata dall'aria che si ferma tra la ruota in movimento e il telaio.

SUPERX

SEMPLICEMENTE LA MACCHINA DA CYCLOCROSS PIÙ AVANZATA AL MONDO.

La SuperX è più leggera della maggior parte delle road bike, ineguagliata nel rapporto rigidità-peso e più fluida di una birra belga. Nulla accelera più rapidamente, curva con maggiore durezza o è più facile da caricare in spalla della SuperX – l'arma da gara definitiva per quelli che vivono per combattere nel glorioso fango ghiacciato del cyclocross.

BALLISTEC CARBON

La nostra struttura in carbonio ad alta resistenza e ad alto impatto prova che i telai in carbonio possono essere sia ultraleggeri che super-duraturi. SuperX è disponibile sia nell'opzione in carbonio BallisTec ad alto modulo di una leggerezza pazzesca, che nella versione leggera standard semplicemente straordinaria.

TECNOLOGIA DI SOPPRESSIONE DELLE VIBRAZIONI SPEED SAVE

Sezioni trasversali appiattite e una sofisticata stratificazione del carbonio consentono alle caratteristiche SPEED SAVE di agire come un sistema di micro-sospensione, deflettendo verticalmente per assorbire gli urti e le vibrazioni del fondo stradale, pur rimanendo estremamente rigide lateralmente per il trasferimento della forza e per manovre sicure in curva.

FRENI A DISCO

Per la prima volta l'eccezionale performance della SuperX nel cyclocross sarà disponibile con potenza d'arresto in qualsiasi condizione meteo, espulsione del fango e modulazione controllata dei freni a disco.

> MAESTRIA CANNONDALE CON L'ALLUMINIO

La leggendaria maestria Cannondale con l'alluminio. Saldature estremamente lisce, attacchi interni conici e lineari, tubi idroformati e l'innovativo puntone del portapacchi del tubo verticale suddiviso con instradamento interno dei cavi contraddistinguono la E-Series.

> PORTAPACCHI/SUPPORTO BATTERIA INTEGRATO

Il portapacchi dai colori abbinati visivamente elegante e lineare integra il supporto della batteria con cavi nascosti, parafango/supporto luci e pompa. Stabile, sicuro e comodo.

> LUCCHETTO BLOCCA - RUOTA POSTERIORE INTEGRATO E SI KICKSTAND

Facile da usare, il blocco ruote posteriore di colore abbinato utilizza la stessa chiave del blocco batteria. Così semplice, pulito e sicuro quando si lascia la bicicletta incustodita. Il Si Kickstand integrato montato posteriormente è stabile, visivamente e funzionalmente integrato: un dettaglio innovativo.

► SISTEMA DI TRASMISSIONE BOSCH A INSTALLAZIONE CENTRALE

Cannondale ha collaborato con Bosch per un periodo di oltre due anni per sviluppare questo rivoluzionario sistema di trasmissione. Il design con installazione centrale assicura una distribuzione ottimale del peso, la massima efficienza e la migliore coppia in assoluto. I sensori misurano richiesta e velocità duecento volte al secondo per garantire che la potenza venga erogata con una morbidezza perfetta in tutte le situazioni.

► COMANDI SEMPLICI E INTUITIVI

Il sistema offre quattro diversi livelli di assistenza, ECO, Tour, SPORT e SPEED per adattarsi alle tue esigenze in sella. I comandi montati al manubrio ti consentono di passare facilmente da una modalità all'altra, senza dover spostare le mani.

► PRESTAZIONI MIGLIORI GRAZIE ALLA SYSTEM INTEGRATION

La nostra forcella integrata HeadShok DL50 è ultraleggera e scorre su cuscinetti ad aghi per una morbidezza e una precisione di sterzo impareggiabili. La batteria a rilascio rapido si integra senza soluzione di continuità nel portapacchi posteriore, per un aspetto sobrio ed elegante.

BAD BOY

> URBANE LEGENDE.

Come un caccia stealth con ruote 700c, la Bad Boy è un modo rapido, stiloso, funzionale e high-tech per spostarsi in città. Più veloce della metropolitana, più trendy di un taxi, Bad Boy aggiunge un pizzico di brivido anticonformista a ogni spostamento urbano.

> OPZIONI FORCELLA UNICHE

La HeadShok Solo DL50, dal look radicale, leggerissima e monofodero, offre 50 mm di corsa fluida, smorzamento idraulico e un comodo bloccaggio, mentre le forcelle rigide non-suspension Solo o Fatty sono superleggere e precise.

> GEOMETRIA SU MISURA

Non sorprende quindi che, nella sua geometria urbana, Bad Boy abbia un'inclinazione un po' più aggressiva della media. La sua posizione e i suoi angoli forniscono una rapida reattività, mantenendo una buona visibilità al rider nel traffico.

> FODERI BASSI SAVE

I foderi bassi dalla forma ottimizzata aggiungono l'assorbimento verticale degli urti e comfort senza compromettere il trasferimento della forza.

QUICK SPEED

> CONFORTEVOLMENTE VELOCE.

Seguendo il percorso del tour attraverso i Pirenei o passando da un caffè all'altro sulla Costiera Amalfitana, lasciate che i chilometri scorrano via mentre vi godete il panorama. La Quick SPEED coniuga la velocità e l'agilità di una bici da strada con una posizione eretta sportiva e la versatilità degli pneumatici 700x28c. Se un «credit card tour» è la vostra idea di vacanza alla grande, o semplicemente al mattino vi piace prendere la strada più lunga per andare al lavoro, la Quick Speed è una compagna perfetta.

> GEOMETRIA SU MISURA DEL RIDER: QUICK

Per le Quick "geometria su misura del rider" significa equilibrio tra una posizione sportiva ed efficiente e la comodità e il comfort della guida ad assetto rialzato.

> FORCELLE SU MISURA

Ogni Quick è abbinata a una forcella Cannondale specificamente progettata per il telaio, per un look inimitabile e un'eccezionale guidabilità.

> CARATTERISTICHE DI COMFORT

Tutte le Quick hanno caratteristiche SAVE nel triangolo posteriore per assorbire gli urti, pedali piani soft-grip e manopole e sella ergonomiche per il massimo comfort.

TESORO/MIXTE

> PERFORMANCE A PIENO CARICO.

In un mondo pieno di pesanti e lenti cavalli da lavoro urbani, Tesoro è un vivace purosangue. Completamente equipaggiata con parafango, portapacchi, luci e manubrio arretrato, la sensazione di elevata performance e la precisione della manovrabilità di questa super-commuter sono caratteristiche tutte Cannondale.

> PERFETTAMENTE EQUIPAGGIATA

I modelli Tesoro vengono forniti già equipaggiati di parafanghi di categoria premium, portapacchi posteriori, lucchetto alla ruota, affidabili generatori per i fari e cavalletti, per nominare solo alcuni accessori.

> MAESTRIA CANNONDALE CON L'ALLUMINIO

La nostra esperienza trentennale nella lavorazione dell'alluminio è evidente nelle forme eleganti dei tubi e nelle saldature lisce a doppio passaggio della Tesoro.

> COCKPIT CONFORTEVOLE

Un attacco del manubrio facilmente regolabile, e il manubrio ribassato su misura consentono al rider di trovare la "giusta posizione".

WOMEN'S

I prodotti Cannondale per la donna sono creati per le donne, dalle donne, tutti guidati dalla filosofia per cui tutte le biciclette devono essere una miscela perfetta di adattabilità, caratteristiche tecniche e stile.

> OVERMOUNTAIN

SCARLET

2 bici in una, versatilità all-mountain per rider che pedalano duro.

> CROSS COUNTRY

LEXI

Bici a doppia sospensione agili e leggere per riding veloce su trail e avventure.

> TRAIL HARDTAIL

TRAIL SL 29'ER WOMEN'S
TRAIL SL WOMEN'S
TRAIL WOMEN'S

Mountain bike ad alte prestazioni per un trail riding a 360 gradi e divertimento off-road.

CALZATA: Ogni bici, sia che sia pensata per una racer avanzata oppure per una principiante, dovrebbe essere costruita per quella donna in particolare. Dalla geometria alla gamma dimensionale, il nostro impegno è volto a fornire il migliore adattamento alle donne di qualsiasi statura.

CARATTERISTICHE TECNICHE: Dai manubri più piccoli alle tarature idrauliche specifiche per ogni taglia, il nostro obiettivo è quello di

rendere queste bici utilizzabili così come sono al momento dell'acquisto. Meno interventi di regolazione e sostituzione significa poter uscire a pedalare quanto prima.

STILE: Il nostro team di designer per i prodotti da donna cercano l'ispirazione su più fronti: dai colori della moda ai nostri stessi atleti. Il risultato? Un aspetto grafico che ti invita ad esplorare la vita su due ruote.

> ELITE ROAD

SUPERSIX EVO WOMEN'S
SUPERSIX WOMEN'S
CAAD10 WOMEN'S

Bici da strada ultra-leggere ad alte prestazioni per atlete e donne che pedalano come atlete.

> PERFORMANCE ROAD

SYNAPSE CARBON WOMEN'S
SYNAPSE ALLOY WOMEN'S

Bici da strada ad alte prestazioni orientate al comfort studiate per incoraggiare a passare tempo in sella.

> TRIATHLON/TIME TRIAL

SLICE WOMEN'S

Bici aero leggere e confortevoli per correre contro il tempo.

SCARLET

> GUARDATE RAGAZZI... LA JEKYLL HA UNA SORELLA.

Con la sua doppia escursione OverMountain, capacità di due bici in una la Scarlet è la bike perfetta per la tipa che picchia duro, con la voglia di salire rapidamente e scendere ancora più rapidamente.

> DOPPIO AMMORTIZZATORE DYAD RT2

Due ammortizzatori in uno. ELEVATE - un ammortizzatore cross-country a corsa corta e FLOW - un ammortizzatore DH a corsa lunga, entrambi disponibili muovendo una semplice levetta.

> DOPPIA PERSONALITÀ

Cambia le modalità del DYAD e cambierà anche la geometria della bici. Più ripida e agile in modalità Elevate, più bassa e stabile in modalità Flow, in questo modo si mantiene sempre la migliore manovrabilità per il terreno.

> GEOMETRIA DA DONNA

Concepita per le donne. Taglie più piccole, tubi orizzontali più corti e uno standover maggiore rispetto alla Jekyll.

SUPERSIX EVO WOMEN'S

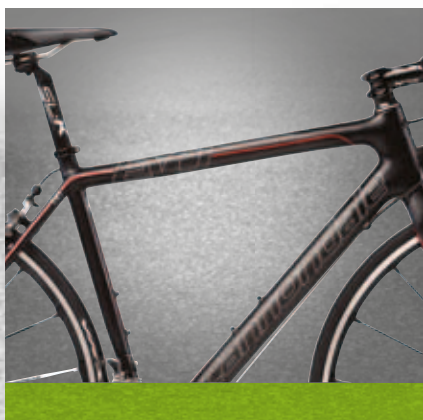

> LA MACCHINA DA STRADA DA DONNA PIÙ AVANZATA MAI CREATA.

La “migliore bici al mondo”, ridisegnata specificamente per la donna. Con la sua miscela quasi perfetta di peso estremamente leggero, vivace efficienza, calzata ideale e morbido comfort di guida, la EVO è la macchina definitiva per le racer d'élite (o quelle che vogliono guidare come se lo fossero).

DUE OPZIONI DI TELAIO IN CARBONIO BALLISTEC

> EVO HI-MOD: Il più leggero telaio da corsa da donna al mondo. La struttura in carbonio BallisTec ad alto modulo garantisce leggerezza e rigidità estreme.

> EVO CARBON: La stessa struttura ma con una percentuale superiore di fibra a modulo intermedio. Con un peso inferiore ai 900 grammi, è ancora uno dei telai da donna più leggeri al mondo.

> GEOMETRIA RACING ELITE

Nuova geometria elite women's basata su altezza e lunghezza offre un margine omogeneo tra ciascuna delle 5 taglie disponibili (48-56), assicurando che ciascuna di loro offra la calzata e la manovrabilità ideali.

> SISTEMA DI MICRO-SOSPENSIONE SPEED SAVE

Sottili zone flettenti integrate nei foderi bassi e alti consentono alla ruota di seguire il tracciato del terreno, migliorando la velocità, la manovrabilità e il comfort. Adattata per l'uso con la forcella SPEED SAVE.

> FORCELLA SPEED SAVE

Una stratificazione direzionale del carbonio BallisTec e i forcellini offset conferiscono alla forcella la capacità di assorbire gli urti, pur mantenendo una manovrabilità affilata come una lama. Disponibile in 2 rake per eliminare la l'interferenza della punta del piede nelle taglie più piccole.

➤ GEOMETRIA PERFORMANTE PER LA DONNA

La nostra geometria a testa alta Women's Performance offre una posizione di guida più eretta e confortevole ed una manovrabilità vivace ma stabile, grazie a un tubo verticale più alto, un tubo orizzontale dalla curva morbida, angolo dello sterzo leggermente rilassato ed un passo leggermente più lungo rispetto alla nostra geometria elite.

➤ SAVE PLUS SISTEMA DI MICRO-SOSPENSIONE

Il triangolo posteriore SAVE PLUS è progettato per riuscire a flettersi leggermente in modo da assorbire urti e vibrazioni della strada, pur rimanendo rigido per l'erogazione della potenza e una manovrabilità sicura.

➤ FORCELLA IN CARBONIO INTEGRALE SAVE PLUS

La forcella SAVE PLUS è messa a punto per lavorare come sistema con i foderi posteriori SAVE PLUS, assorbendo gli urti e lasciando al rider il controllo in modo confortevole.

> SISTEMA DI MICRO-SOSPENSIONE AERO SAVE

Un'elegante combinazione di formatura direzionale dei tubi e di sofisticata stratificazione del carbonio consente ai foderi bassi posteriori e a quelli alti di flettersi insieme verticalmente, in modo che sia la bici ad assorbire gli urti, e non il ciclista. Per essere aerodinamici più a lungo e scendere più velocemente dalla bici.

> RUOTE DA 650C

Le ruote da 650c sulla nostra taglia da 47cm significa che il tubo dello sterzo è più basso rispetto alle bici con ruote da 700c, in questo modo anche le rider più basse possono trovare il perfetto adattamento aero. Inoltre per queste la sovrapposizione della punta del piede è inferiore e possono ottenere una migliore aerodinamicità rispetto alle bici con ruote più grandi.

> STRUTTURA DI FACILE MANUTENZIONE

Freni standard da strada, normale struttura attacco manubrio/canotto sterzo, passaggio diretto dei cavi e forcellini posteriori verticali: tutto contribuisce a un vantaggio puramente aero del design di questa superbike, ma con facilità di regolazione, uso e manutenzione.

> **BETH WELSH.**

“È così leggera e morbida. La Slice mi aiuta ad andare più forte.”

> SALDATURE LISCE

Il marchio di fabbrica Cannondale delle saldature lisce a doppio passaggio elimina i punti di stress e i punti deboli che si possono trovare sui telai saldati in modo tradizionale, permettendoci di costruire telai più leggeri e più resistenti.

> SERIE STERZO INTEGRATA

La serie sterzo integrata dona alle nostre bici da bambino un minor peso e la finitura che ci si aspetta su biciclette di alto livello.

> CASCHI

Per garantire la sicurezza, assicurati di indossare un casco Cannondale. La tecnologia di stampo In Fusion e il Easy Fit System assicurano durata, leggerezza e confort.

CYPHER

ANDRAI COSÌ VELOCE CHE LA GENTE PENSERÀ CHE LO HAI RUBATO.

La tecnologia del guscio con Protezione massima utilizza una schiuma EPS a doppia densità per ridurre il peso e mantenere al contempo i più elevati standard di sicurezza industriali.

La gabbia interna in policarbonato rinforza le prese d'aria per renderlo il migliore in quanto a sicurezza e ventilazione.

La tecnologia del guscio in policarbonato a catalizzazione multipla lega il guscio esterno alla schiuma EPS per creare un design unico integrato.

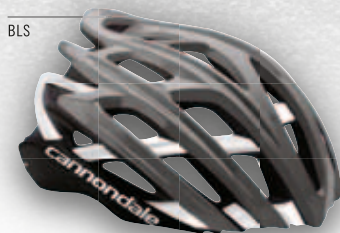

La vestibilità con micro-regolazione integrata con cuscinetto occipitale EVA Ergo-Fit offre un comfort senza precedenti e una vestibilità personalizzabile.

23 prese di aerazione in grado di mantenere un flusso d'aria all'interno del casco e mantenere la temperatura costante, mentre le imbottiture sigillate a caldo assorbono il sudore.

PAD STACK AND REACH ARE MEASURED TO THE CENTER OF THE PAD. SUBTRACT 40MM FOR REAR OF PAD, FSA AERO EXTENSIONS AND ARM RESTS.

* THE SLICE SEAT POST HAS TWO POSITIONS FOR MOUNTING THE SADDLE. A FULL RANGE OF ANGLES FROM 73 TO 79 DEGREES IS ACHIEVABLE DEPENDING ON THE RIDER'S PREFERENCE AND/OR THE EVENT.

**STACK IS MEASURED VERTICALLY FROM THE CENTER OF THE BB TO THE TOP OF THE HEAD TUBE. REACH IS MEASURED HORIZONTALLY FROM THE CENTER OF THE BB TO THE TOP OF THE HEAD TUBE. IF YOU RIDE A 56 ROAD FRAME, YOU SHOULD CHOOSE A SIZE 56 SLICE FRAME.

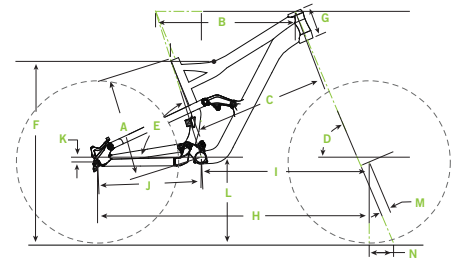

ALL SIZES HAVE 700C WHEELS.

Please refer to www.cannondale.com for the most recent specifications.

NO WEIGHTS? Don't believe the hype. Scales differ, and marketing departments have been known to fib. The best way to compare bike weights is to head to your local bike shop. Grab two comparably spec'd and built bikes, and ask the proprietor for a scale. Hang 'em high, and see who's the lightest.

Bicycling has risks of serious injury or death that cannot be completely avoided. Risk can be minimized by: Reading and following all warnings and instructions in owner's manuals, owner's manual supplements, always wearing a helmet, practice and step-by-step learning, riding in control and within your capabilities. Catalog text and descriptions are marketing materials, not instructions or guidelines for use! Visit <http://www.cannondale.com/bikes/tech/safety> for warnings, technical documents, and safety guidelines.

Warning: Reflectors are not a substitute for proper lights. It is your responsibility to equip your bicycle with all state and locally mandated lights. Riding at dawn, at dusk, at night or at other times of poor visibility without a bicycle lighting system which meets local and state laws and without reflectors is dangerous and may result in serious injury or death.

If you ride your bike before dawn or after dusk, your bicycle must be equipped with lights so that you can see the road and avoid road hazards, and so that others can see you. Traffic laws treat bicycles like any other vehicle. That means you must have a white front and a red rear light operating if you are riding after dusk. Your bike dealer can recommend a battery or generator powered lighting system appropriate to your needs.

Cannondale also strongly urges you to use a flashing light or strobe. All of us at Cannondale who ride at night or in conditions of lower visibility use flashers. They can save your life

Please note: Despite our nagging, members of the Liquigas pro road racing team (and other professional sponsored teams) may appear or race without helmets. We don't think it's a good idea, but they are experienced, professional cyclists and they know the risks. They are also adults, so we respect their right to choose. Despite the intransigence of any teams, we strongly advocate the use of helmets on every ride. Wearing a helmet is perhaps your single best defense against a major medical catastrophe while riding, so buckle up!

Warning: Free riding is inherently dangerous. Read Free ride Warning at <http://www.cannondale.com/bikes/tech/safety.html>
